

### Studding snowmobiles that have SilentDrive tracks with inter pitch drivers

**NOTE** – With the introduction of SilentDrive and inter pitch with 16 tooth “internal drivers”, you will notice two different pre-marked emboss shapes; round and triangle. SilentDrive tracks with inter pitch drivers use a **triangular** emboss for stud locations.

Currently, this only applies to the following snowmobiles:

2014 Ski-Doo Grand Touring LE 900 ACE

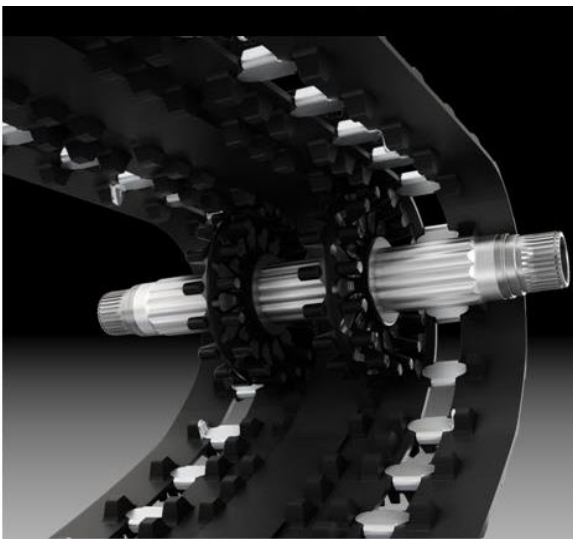

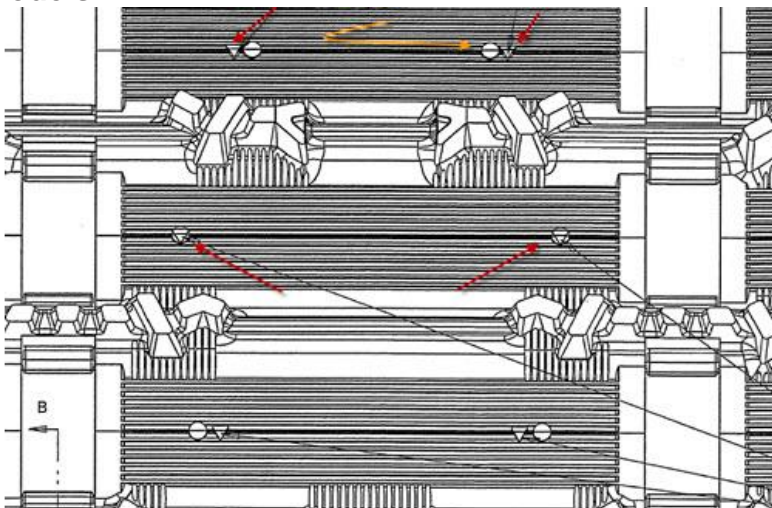

2015, 2016 & 2017 Ski-Doo Grand Touring LE 600 HO, 900 ACE & 1200 4-TEC

2015, 2016 & 2017 Ski-Doo Grand Touring SE 1200 4-TEC

2017 Ski-Doo Grand Touring SE 900 ACE

2018 Ski-Doo Grand Touring LE & SE models

» **These sleds should ONLY be studded using the locations marked with the embossed triangular symbol pre-marked on the track** « **Do NOT use any studding template on these models.**

*SilentDrive tracks with inter pitch drivers use a triangular emboss for stud locations.*

Note: Non SilentDrive tracks use a round emboss for stud positioning
